The issue of data cleaning:

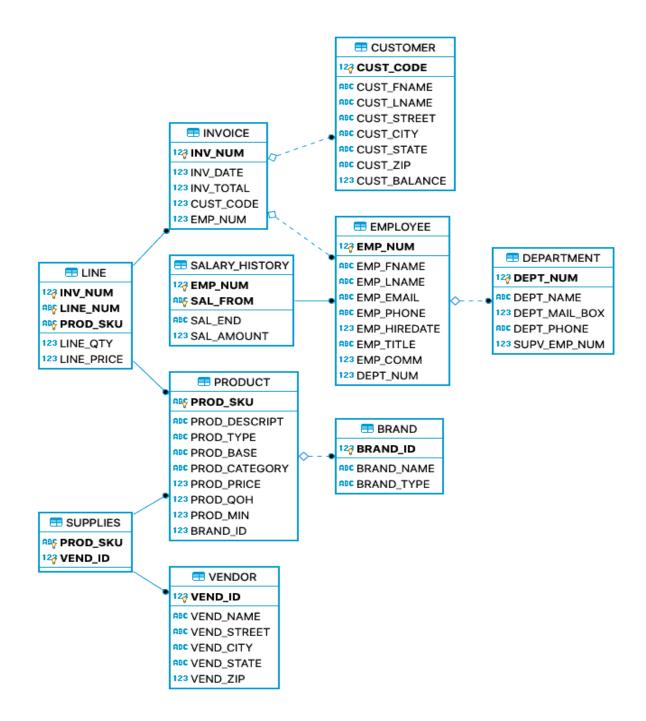

When I clean the file, I found above of questions.

- CUST_ZIP has different digits of number. I search the US official website to check the zip-code and then fill digits with 0 to match the number of digits which are 5.
- VEND STREET value missing
- VEND NAME value missing
- SAL END value missing
- There are many unnecessary spaces everywhere. I drop all the spaces for convivence to do query.
- There is same problem in VEND ID as CUST ZIP
- There are special marks in PROD_QOH. I drop the value with special number, special marks.
- There are many values zero in EMP COMM.
- EMP HIREDATE should be consisted of number with 5 digits.
- There is some situation that two different names in single invoices.
- Change "EMP_ID" to "EMP_NUM" in table INVOICE which can connect table EMPLOEE

ERD

I set the foreign keys in these tables:

- the foreign key "DEPT_NUM" in EMPLOYEE for connecting the DEPARTMENT which primary key is "DEPT_NUM"
- the foreign key "CUST_CODE" and "EMP_NUM" in INVOICE for connecting the CUSTOMER and EMPLOYEE
- the foreign key "INV_NUM" and "PROD_SKU" in LINE for connecting the INVOICE and PRODUCT
- the foreign key "BRAND_ID" in PRODUCT for connecting the BRAND which primary key is "BRAND_ID"
- the foreign key "EMP_NUM" in SALARY_HISTORY for connecting the EMPLOEE which primary key is "EMP_NUM"

Questions:

1. Write a query to display the current salary for each employee in department 300. Assume that only current employees are kept in the system, and therefore the most current salary for each employee is the entry in the salary history with a NULL end date. Sort the output in descending order by salary amount.

```
SELECT EMP_NUM, SAL_AMOUNT
FROM SALARY_HISTORY
WHERE SAL_END = ' - '
AND EMP_NUM in (
SELECT EMP_NUM
FROM EMPLOYEE
WHERE DEPT_NUM = 300
)
ORDER BY SAL_AMOUNT DESC
```

| | 123 EMP_NUM \(\frac{1}{4}\) | 123 SAL_AMOUNT 🏋 |

7. One of the purchasing managers is interested in the impact of product prices on the sale of products of each brand. Write a query to display the brand name, brand type, average price of products of each brand, and total units sold of products of each brand. Even if a product has been sold more than once, its price should only be included once in the calculation of the average price. However, you must be careful because multiple products of the same brand can have the same price, and each of those products must be included in the calculation of the brand's average price.

```
SELECT f1.brand_name, f1.brand_type, round(f1.average_price,2) AS
AvaPrice, f2.amt_sold AS UnitsSold FROM
( SELECT b.brand_name, b.brand_type, b.brand_id,
(sum(p.prod_price)/count(distinct p.prod_sku)) AS average_price
FROM product AS p, brand AS b
WHERE b.brand_id=p.brand_id
GROUP BY b.brand_id
ORDER BY b.brand_name
) AS f1
INNER JOIN
( SELECT b.brand_id, sum(l.line_qty) AS amt_sold
FROM brAND AS b, line AS l, product AS p
WHERE b.brand_id = p.brand_id
AND p.prod_sku = l.prod_sku
GROUP BY b.brand_id
ORDER BY b.brand_name
) AS f2
ON f1.brand_id = f2.brand_id
ORDER BY round(f1.average_price,2) desc;

8. The purchasing manager is still concerned about the impact of price on sales. Write a query to display the brand name, brand type, product SKU, product description, and price of any products that are not a premium brand, but that cost more than the most expensive premium brand products.

```
SELECT b.BRAND_NAME,b.BRAND_TYPE, p.PROD_SKU, p.PROD_DESCRIPT,
p.PROD_PRICE
FROM PRODUCT AS p
INNER JOIN BRAND AS b
ON p.BRAND_ID = b.BRAND_ID
WHERE b.BRAND_TYPE != "premium"
AND p.PROD_PRICE >
(SELECT max(p.PROD_PRICE))
FROM product AS p
INNER JOIN BRAND AS b
ON p.BRAND_ID = b.BRAND_ID
WHERE b.BRAND_TYPE = "premium");
```

| | RBC BRAND_NAME | T: | ABC BRAND_TYPE | T: | ₽₽Ş PROD_SKU | T: | ABC PROD_DESCRIPT | 11 | 123 PROD_PRICE | T: |

10. Using predictive statistics calculate what the predicted forecast of sales for the next year based on the INV DATE (independent) and INV TOTAL (dependent).

If I use the variable INV_DATE, which is date, to explain, it would not be allowed to explain the dependent variable INV_TOTAL. The type of the INV_TOTAL is numerical. If I do the regression, the independent variable should be the same type with INV_TOTAL. I clean the data to eliminate the duplicated date, which means, there are many INV_TOTAL in the same date. I calculate their mean, assigning the number as the INV_TOTAL to the specific day.

The regression model doesn't fit. I try to use the autoregression model to explain, which is using the lagging value of INV_TOTAL to be explanatory variable and do the analysis. The following I will show the model:

INV TOTAL
$$_{t} = \beta_{0} + \beta_{1}$$
 INV TOTAL $_{t-1} + \beta_{2}$ INV TOTAL $_{t-2} + e_{t}$

Then to use two lagging values establishes the autoregressive model. The following would show the result of the regression:

| SUMMARY OUTPUT | | | | | | | | |
|-----------------------|--------------|--------------|-----------|-----------|--------------|-----------|-------------|-------------|
| | | | | | | | | |
| Regression Statistics | | | | | | | | |

| Observations | 263 | | | | | | | |
| ANOVA | | | | | | | | |
| | df | SS | MS | F | Significance | F | | |
| Regression | 2 | 1094.3058 | 547.15291 | 0.0993921 | 0.9054221 | | | |
| Residual | 260 | 1431298.9 | 5504.9958 | | | | | |
| Total | 262 | 1432393.2 | | | | | | |
| | Coefficients | Standard Err | t Stat | P-value | Lower 95% | Upper 95% | Lower 95.0% | Upper 95.0% |
| Intercept | 207.11791 | 18.197806 | 11.381477 | 1.27E-24 | 171.28406 | 242.95176 | 171.28406 | 242.95176 |
| lag1 | -0.014111 | 0.0620169 | -0.227538 | 0.8201844 | -0.136231 | 0.1080082 | -0.136231 | 0.1080082 |
| | -0.023963 | 0.062012 | -0.386426 | 0.6994971 | -0.146073 | 0.0981467 | -0.146073 | 0.0981467 |

INV_TOTAL t= 207.12 -0.014 INV_TOTAL t-1 + -0.024 INV_TOTAL t-2

From the figure, the coefficients of the two lagging are around -0.014 and - 0.024, which means the INV_TOTAL has negative relationship with its lagging value. However, the p-value of them are larger than 0.05, which tells us those are not statistically significant. The INV_TOTAL may not have significant relationship with its lagging value.

Additionally, the R² is about 0.07%, which means there are only 0.07% of the INV_TOTAL can be explained by its lag values. I think the percentage is too small to explain.
